

MOTIONBENCH

Commissioning tool with tuning capabilities

AT A GLANCE

- ▶ Automatically detect and list available drives
- ▶ Connect to multiple drives simultaneously
- ▶ Configure motor settings
- ▶ Tune system parameters
- ▶ Drive data logger
- ▶ Save and restore configurations

Customisable software that allows you to configure, connect & tune.

SIMPLE OPERATION

MotionBench is a software application designed to make the task of commissioning and tuning digital servo drives easy.

YOU'RE IN CONTROL

Update drive code, run tuning algorithms, load parameters, and view the system response in a few simple clicks.

CUSTOMISED INTEGRATION

Connect and configure multiple drives simultaneously that you can save as customised settings you can recall anytime.

CUSTOMISABLE

- Save and restore configurations
- Update drive code
- Load parameters
- Run tuning algorithms

SUPPORT

- Customised solutions tailored to your exacting requirements
- Ongoing support through your products life-cycle

AUTOMATION

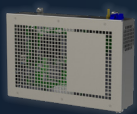

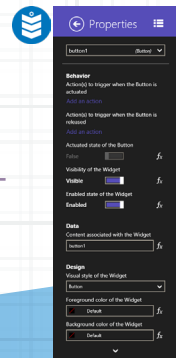

- View system response
- Automatically detect and list available drives

FUNCTIONALITY

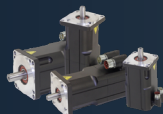

- Connect to multiple drives simultaneously
- Configure motor settings
- Tune system parameters
- Drive data logger

INTEGRATION

- Can be integrated with existing software or Commander
